

HORSTKEMPER

INDIVIDUELLE ANLAGENTECHNIK

Competent. Experienced. Powerful.
Innovation is our business

The company

The more than 60 years of experience gained by Horstkemper form a solid basis for the success of our customers. As a mechanical engineering company that approaches complete solutions, we offer you everything from one source - from planning, through design, project development, manufacture and assembly, to comprehensive after-sales service. A large vertical range of manufacture allows us to respond to current market demands anytime, flexibly and immediately. New installations, extensions, modifications & upgrades and preventive & repair maintenance are carried out by our competent staff all over the globe. Due to a modular design concept with many identical components on the machines and plants, almost all spare parts can be made available on site in a short time. Hence, downtime can be avoided effectively.

Miscellaneous portfolio

We have a lot of experience and know-how especially in the field of automation for the wood and furniture manufacturing industry. Moreover, innovative solutions for the automotive and logistic industry also represent a substantial part of our range of services. In close cooperation with our clients, we develop tailor-made and powerful systems that exactly suit your requirements. In this process, new technologies and innovations are continuously being integrated into our portfolio. So you can always be sure you are getting state-of-the-art technology. We are always ready to meet market challenges!

More infos:

A powerful team

Solid quality and profound qualification are closely interlinked. The experienced and dynamic Horstkemper team currently consists of more than 50 highly qualified and continually trained employees. In order to have competent qualified people also in the future, we periodically qualify junior employees of the region as precision mechanics.

Our services

- Planning of the processing plant & simulations
- 3D CAD designs
- Project management
- Mechanical engineering
(cutting, welding, paint-finishing, turning, milling)
- Assembly, installation & test runs
- Control systems (Siemens und Beckhoff)
- Documentation
- CE marking
- Spare parts service & maintenance
- Theoretic and practical training
and many more

Automation for the automotive industry

For more than 20 years, Horstkemper has specialized in the automation of pressing facilities in the automotive industry – a sector that is developing dynamically and gaining more and more importance. Apart from machine and plant manufacturing, also the complete control system technology is part of the portfolio of Horstkemper. Here, we have been closely cooperating with proven partners over many years.

To ensure a highly efficient process chain, we develop and create tailor-made solutions for our customers. No matter whether it is complete destackers, feeder automation or end-of-line systems: we always guarantee the highest standards of performance and quality. Our plant technology applications range from retrofit projects for the modernisation of existing press lines to completely new installations. The portfolio is primarily based on standardized series of feeder and gantry machines for various requirements which are individually adapted to the transfer and feeder applications in the field of press line integration and press hardening or hot forming.

Everything from one source

With the experienced team of Horstkemper, you feel to be in competent hands from beginning to end. From the first analysis of your needs to commissioning and reliable maintenance – all components of performance will be implemented by our versatile experts. The work cell configuration will be exactly tailored to your specific needs. In this process, parameters such as budget, available floor space and intended production capacity will be considered in order to create an optimal work cell concept enabling automation with maximum benefit.

As a turnkey provider, we are increasingly supporting our customers also in the area of international sales activities in the countries in which they are active. We will be happy to give you advice and information!

Automation for the wood and furniture manufacturing industry

Every company and every production process have their own specific characteristics and conditions. That's why standard solutions do not normally generate the desired result. This applies also and in particular to the wood and furniture manufacturing industry. We plan, construct and supply tailor-made solutions based on individual customer requirements. From choosing the suitable system components and control elements to the complete production line, we will evaluate all details accurately and match them with each other. Here you will benefit from the many years of experience of our project engineers and designers as well as from the commitment and qualification of our production and maintenance personnel. In order for all members of the team to be able to always use state-of-the-art know-how, they are periodically trained and qualified.

Competence on your side

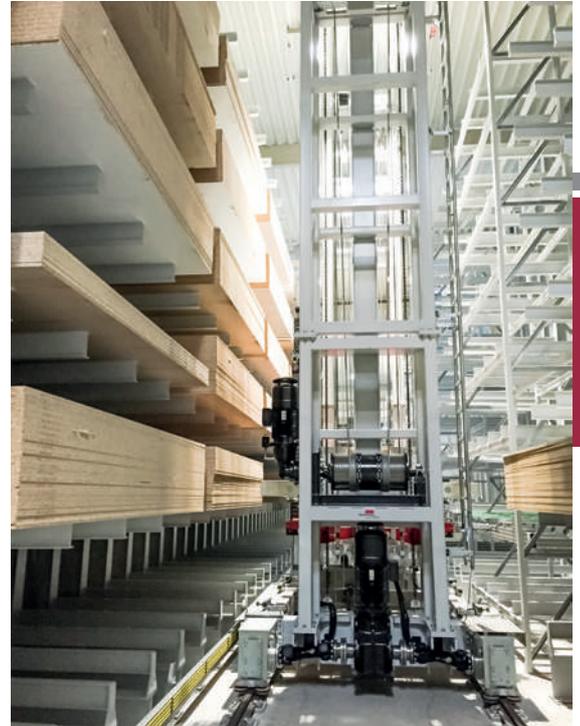

Horstkemper offers you innovative machinery and plant technology for fully automated processing of furniture components. The tasks to be accomplished are miscellaneous. They include, for example, stack infeed via cross conveyors and floor roller conveyors, singulating the stacks and feeding the panels to the panel saw by a vacuum destacking unit and diagonal roller conveyor, sawing the panels, outfeed, singulating and aligning the parts, their edge banding and many other tasks such as storage and customization by special stacker cranes. Having been a specialist in the industry for many years, we are able to understand every detail of your process and to find the optimal solutions for your requirements. There are practically no limits to the layout flexibility. We design and implement the suitable concepts to meet your individual production requirements.

Die **Elektro daniel GmbH** ist spezialisiert auf individuelle Konzepte und Systemlösungen im Bereich der Automatisierungstechnik. Durch unsere langjährige Erfahrung im Maschinen- und Anlagenbau realisieren wir selbst komplexe Systemlösungen innovativ und souverän.

Automation for the logistics industry

We offer customized logistics solutions to customers from miscellaneous fields for handling and transport of components. Our long-lasting, high-quality technology guarantees high technical availability. Short maintenance processes that are exactly matched with each other make sure that any interruption of your value-adding chain is minimized. Our solutions are conceived so that production processes are simplified and accelerated. No matter whether it is stacker cranes, flow assembly lines or transfer carriages: smart and individual solutions for your intralogistics increase efficiency and process security by optimizing the work flow.

Everything is in flow

Time is money – this applies particularly in the intralogistics field. We offer you attractive solutions for flow assembly that will allow you to improve your production processes and simplify the entire logistics chain, because operators will need each subassembly or part only at one station. This will enable improved planning according to a predetermined cycle. Moreover the specialization of employees will increase the quality of work, ensure adherence to schedules and optimize the entire value-adding chain.

Stacker cranes allow fully automatic storage and retrieval of unit loads. Our stock management computers enable you to face the increasing demands of modern, fast work flow. Via an interface to the stock management software, stock movement jobs can be sent to the stacker crane. This will then make available the requested material to the desired position.

Our transfer carriages are conceived so that even special requirements from very different sectors can be met without problem. Loads up to 55 tons have already

been put into practice. Our transfer carriages / FTS can be used for many tasks of intralogistic transport, they support automated work flow. Furthermore, wireless power transfer guarantees a maximum of cost-effectiveness and safety at work. Wireless communication via WLAN facilitates linking to intelligent workflow control systems.

Unser Produktschwerpunkt liegt bei universell einsetzbaren Maschinensteuerungen, Speicherprogrammierbare Steuerungen: **SPS - CNC - PC - Roboter**

Zu den Einsatzbereichen unserer Steuerungen für den Maschinen- und Anlagenbau gehören Industriezweige wie Metall, Holz und Kunststoff so wie Chemie, Lebensmittel und Konsumgüter.

ENGINEERING / PROJEKTIERUNG / SOFTWAREENTWICKLUNG

Als leistungsfähiger Partner von Maschinen- und Anlagenbau so wie Produktionsbetrieben bieten wir bedarfsorientierte Lösungen von der Projektierung und Realisierung bis hin zur Softwareentwicklung.

SCHALTSCHRANKBAU

Unser Betrieb ist in der Lage Schaltschränke zur Steuerung von Anlagen / Maschinen jeder Art zu fertigen. Schaltschränke werden unter Berücksichtigung verbindlicher Normen und Betriebsmittelvorschriften auftragspezifisch geplant und gebaut. Wir verwenden ausschließlich anerkannte Produkte. Bei kundenspezifischen Schränken fertigen wir nach Vorgabe (Schaltpläne, Material).

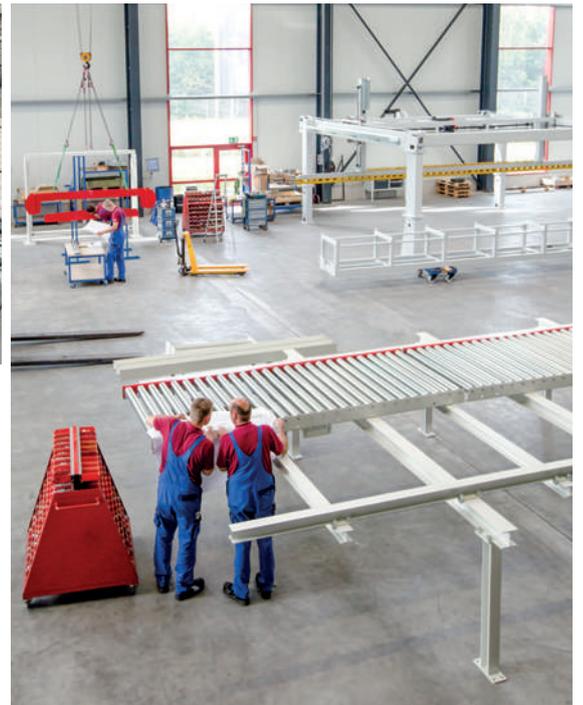

MASCHINENINSTALLATION

Unser Wirkungsgebiet im Bereich der Anlagen- und Maschineninstallation erstreckt sich bis über die Grenzen Deutschlands hinweg. Durch Erfahrungen bei In- und Auslandsmontagen in verschiedensten Industriezweigen kann unsere Firma Installationsarbeiten auf höchstem Niveau erledigen.

ANLAGENMODERNISIERUNG

Mit einer Modernisierung steigern Sie die Produktivität Ihrer Anlagen und die Qualität der erstellten Produkte. Wir realisieren eine Anlagenmodernisierung in Wechselwirkung mit dem, was technisch machbar und sinnvoll ist.

Partner to the entire plant manufacturing industry

We can also take complete responsibility for the implementation of fully integrated production lines. Here our scope of work is as comprehensive as your needs, ranging from planning and design through putting the project into being and setting it up, to maintenance and service. In this process, an efficient process chain and high value adding principles are at the centre of our work. Our experts will be glad to take time for your requests and will give you comprehensive advice. You will profit from our decades of industrial experience and benefit from our excellent networking with our partners.

We are planning for the future

Another important element in our philosophy is to keep our employees bound to the company. We know that having a well-functioning team is crucial. For this reason, we invest continually in a positive and modern work environment. For example, we recently modernized our recreation and social rooms. However, investments of course go well beyond this. They include state-of-the-art 3D design software as well as modern production facilities and office space.
